

SNAP DNP I/O is a low-cost RTU alternative that seamlessly integrates into your DNP3-based SCADA system.

SNAP DNP I/O on an 8-module SNAP rack with various SNAP analog and digital I/O modules

Overview

Since its creation, the DNP3 protocol has been widely adopted in the electrical, water/wastewater, transportation, and oil and gas industries. Opto 22, a manufacturer of monitoring and control hardware, and POWER Engineers, a global consulting and integration services firm specializing in energy, facilities, and communication projects, have co-developed SNAP DNP I/O, a low-cost RTU alternative that seamlessly integrates into your DNP3-based SCADA system. In doing so, SNAP DNP I/O offers:

- Monitoring, control, and data acquisition from remote electrical and other utility equipment
- Interoperability between multi-vendor devices
- Reduced software costs
- Easy system expansion
- Operational savings
- Integration of legacy equipment into a DNP system
- Acquiring analog input data that conveys voltages, currents, power, and temperatures
- Setting analog output values such as pressure or voltage levels
- Tripping circuit breakers, opening or closing valves, and controlling other equipment remotely

SNAP DNP I/O capabilities include:

- Monitoring binary input data for two-state devices (for example, determining if a circuit breaker has been tripped or if an alarm state is present)

Additionally, the SNAP DNP I/O system's modularity and distributed intelligence enables quick and seamless expandability, allowing you to remotely monitor and control newly added facility equipment without reprogramming or altering your existing systems.
