

Company Profile

Founded in 1974, Opto 22 develops and manufactures hardware and software for applications in industrial automation, Internet of Things (IoT), process control, discrete manufacturing, remote monitoring, and data acquisition. The company's products utilize standard, commercially available Internet and computer technologies to connect businesses' mechanical, electrical, and electronic systems to computer networks, software applications, and online services.

With Opto 22 products, organizations can monitor, control, and exchange data with critical equipment such as manufacturing and processing machinery, refrigeration systems, HVAC systems, and storage tanks, as well as more industry-specific assets like utility systems, natural gas compressors, pipelines, and telecommunications equipment. More than 10,000 installations worldwide currently rely on Opto 22 products.

Opto 22 was started by a co-inventor of the solid state relay (SSR), who discovered a way to make SSRs more reliable. The company is still privately held and run by engineers.

Opto 22's hardware products are widely recognized and highly regarded in the automation industry for their innovation, quality, and reliability. These products are manufactured at the company's 160,000-square-foot manufacturing facility, adjacent to its corporate headquarters in Temecula, California. This factory ships more than half a million products per month, and each is individually tested prior to shipping. These superior quality assurance standards make Opto 22 confident in

guaranteeing all of its optically isolated solid state relays and most I/O modules for life.

Opto 22 has thousands of satisfied customers in industries including manufacturing, telecom, water and wastewater, oil and gas, power, food service, retail, and government. To support these customers, the company offers free pre-sales engineering consultation, free hardware and software training at Opto 22 corporate headquarters, and free product support for life.

With reliability, innovation, and open standards as its benchmarks, Opto 22 makes it faster and easier to connect to, control, monitor, and gather business intelligence from the extended enterprise and bring it into business applications.

Opto 22 products are available directly through the Opto 22 website and through a worldwide network of authorized distributors, partners, and integrators.
