

YOUR BUSINESS CAN COUNT ON OPTO 22

A trusted American manufacturer built for long-term reliability

You've confirmed that Opto 22 technology is the right technical fit.

Now see why companies like yours—including over 70% of the Fortune 100—have trusted us for over 50 years as their long-term business partner.

When you choose Opto 22, you're working with a company that:

- **Operates with complete financial independence and zero debt**
- **Designs, manufactures, and supports everything in the United States of America**
- **Maintains full control of its supply chain for consistent quality and delivery**
- **Scales production to meet your enterprise-level demand**
- **Builds things that last—products, partnerships, and careers alike**
- **Keeps products available and supported for decades**
- **Communicates directly, clearly, and accountably at every stage**

Independent and Enduring

Founded in 1974 by engineers focused on building things that last, Opto 22 remains privately held and self-funded. That independence keeps your projects steady—unaffected by shareholder pressure or market swings. We plan in decades, not quarters, and back every commitment with the same stability that has guided us for over 50 years.

Complete Control of Operations

All design, manufacturing, testing, and logistics take place at our 160,000-square-foot facility in Temecula, California. With every process under one roof, we maintain full control of quality, cost, and delivery. This vertical integration keeps your orders moving even during global disruptions, ensuring reliable fulfillment and predictable lead times for projects of any size.

A Workforce Built on Experience

Our strength is our people. Many have spent decades here at Opto 22, carrying deep knowledge of our systems, customers, and standards. That continuity means clear communication, practical guidance, and steady follow-through from your first conversation to long-term support. We don't outsource responsibility—every relationship stays with the team that designs, builds, and delivers.

Partnership in Execution

You can rely on Opto 22 to keep large projects coordinated and on schedule. Dedicated project leads align design, production, and logistics from start to finish, ensuring smooth communication and consistent results. Whether standardizing across OEM systems, scaling in phases, or managing multi-site rollouts, we deliver reliably at any size—with the same responsiveness worldwide through our long-standing partners.

Proven Capacity at Scale

Opto 22 systems run continuously in thousands of facilities worldwide—supporting industrial, commercial, energy, and infrastructure operations that cannot afford downtime. Our ability to plan, build, and ship consistently has been proven over decades of field performance. You can standardize with confidence, knowing your systems will remain supported for the life of the asset.

Doing Business the Right Way

Our approach is straightforward: transparency in pricing, honesty in communication, and follow-through on every commitment. There are no hidden fees, recurring licenses, or forced upgrades. When you work with Opto 22, you know exactly what to expect—and you get it. We measure success by how long our relationships last, not by how quickly they close.

Built to Last—Built to Support

Opto 22 combines technical excellence with operational strength to deliver what others promise: reliability you can count on year after year. We continue to expand U.S. manufacturing, strengthen logistics, and invest in people who stay for the long term. For organizations seeking a partner that stands behind every product and every promise, Opto 22 gives you certainty in an uncertain world.

Moving Forward
